SYSTEM DESCRIPTION

Current coatings are fixed and require a re-coating of the complete vehicle when environments change.

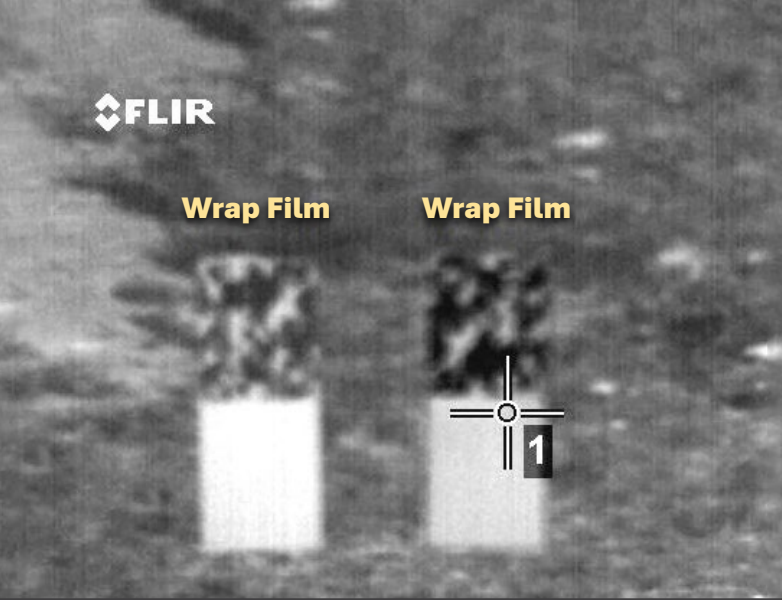

This technology offers a covering with significant THERMAL/IR detection characteristics, and it also is capable of being attached in a manner to change the vehicle's exterior appearance.

The addition of this capability reduces drastically detection distances allowing ground vehicle systems greater maneuverability and positioning prior to detection. This allows for both increased survivability as well as lethality.

- It is easy to apply and remove from vehicles and equipment (easy stick-on, easy peel-off solution).
- It is provided in ROLLS of 1M x 1.5M and SHEETS of 30 CM x 50 CM of sheets which can be used as an array to complete a bigger surface of cut to size if required for smaller applications.
- ULTRA-lightweight & durable easy to apply and remove.
- Available in ZONE TONE Sand, Green, Brown, etc., and woodland, desert, rocky, urban, arctic and other patterns where camouflage painting or use of other camouflage means is practically impossible.

Battlefield / Warfighting Usage

For a temporary or permanent concealment mission.

Great for use on acquired assets in the field, with the ability to return the equipment back to the original state in no time.

Special Forces Units where they have constantly to adjust to various operational environments and sometimes behind enemy lines.

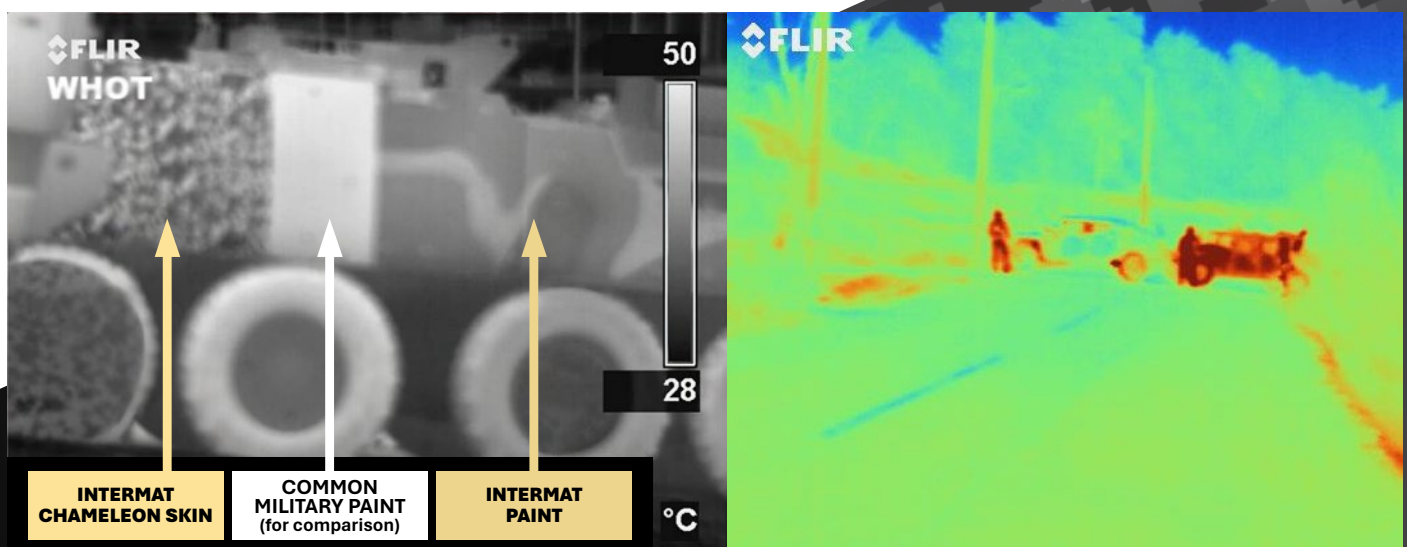

Units that are equipped with specialized weapon systems and cannot use other camouflage means (nets, etc) and/or have to move constantly in Operational Area (e.g. shoot and scoot units-no time and personnel to allocate for camouflage nets deployment).

Commercial of the Shelf (COTS) vehicles (e.g. civil vehicles that military finds appropriate for use) or materials and equipment (portable computers, generators, Bergen bags etc) that normally no, serious camouflage is provided.

Concept of Employment

No special training needed for application, and only using basic tools

Camouflage, Concealment and Deception on the go

**Multispectral responding to
NWIR, SWIR, MIDWIR 3-5, LWIR 8-14
spectrum ranges**
